## SECTION 1 IDENTIFICATION OF THE SUBSTANCE / MIXTURE AND OF THE COMPANY / UNDERTAKING

## **Product Identifier**

| Product name                     | FW-RIC N&A Rice Krispies Type Flavor |
|----------------------------------|--------------------------------------|
| Synonyms                         | Not Available                        |
| Other means of<br>identification | Not Available                        |

#### Relevant identified uses of the substance or mixture and uses advised against

| Relevant identified | Use according to manufacturer's directions. |
|---------------------|---------------------------------------------|
| USES                |                                             |

#### Details of the manufacturer/importer

| Registered company<br>name | Flavor West Manufacturing, LLC.                       |
|----------------------------|-------------------------------------------------------|
| Address                    | 29400 Hunco Way, Lake Elsinore CA 92530 United States |
| Telephone                  | (951) 893-5120                                        |
| Fax                        | (714) 276-1621                                        |
| Website                    | www.FlavorWest.com                                    |
| Email                      | Flavor@FlavorWest.com                                 |

#### **Emergency telephone number**

#### SECTION 2 HAZARDS IDENTIFICATION

Classification of the substance or mixture

GHS Classification Eye Irritation Category 2B

## Label elements

| GHS label elements | Not Applicable |
|--------------------|----------------|
|                    |                |
| SIGNAL WORD        | WARNING        |
|                    |                |

## Hazard statement(s)

| Causes eye irritation |
|-----------------------|
|                       |

#### **Precautionary statement(s) Prevention**

| P264 Wash all exposed external body areas thoroughly after handling. |  |
|----------------------------------------------------------------------|--|
|----------------------------------------------------------------------|--|

## Precautionary statement(s) Response

| P305+P351+P338 | IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. |
|----------------|----------------------------------------------------------------------------------------------------------------------------------|
| P337+P313      | If eye irritation persists: Get medical advice/attention.                                                                        |

## Precautionary statement(s) Storage

Precautionary statement(s) Disposal

## SECTION 3 COMPOSITION / INFORMATION ON INGREDIENTS

#### Substances

See section below for composition of Mixtures

### Mixtures

| CAS No   | %[weight] | Name             |
|----------|-----------|------------------|
| 57-55-6  | 90-99     | propylene glycol |
| 121-33-5 | 1-5       | vanillin         |

The specific chemical identity and/or exact percentage (concentration) of composition has been withheld as a trade secret.

## **SECTION 4 FIRST AID MEASURES**

## Description of first aid measures

| Eye Contact  | If this product comes in contact with the eyes:                                                                                                                                   |
|--------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|              | Wash out immediately with fresh running water.                                                                                                                                    |
|              | <ul> <li>Ensure complete irrigation of the eye by keeping eyelids apart and away from eye and moving the eyelids by occasionally<br/>lifting the upper and lower lids.</li> </ul> |
|              | Seek medical attention without delay; if pain persists or recurs seek medical attention.                                                                                          |
|              | Removal of contact lenses after an eye injury should only be undertaken by skilled personnel.                                                                                     |
| Skin Contact | If skin contact occurs:                                                                                                                                                           |
|              | Immediately remove all contaminated clothing, including footwear.                                                                                                                 |
|              | ▶ Flush skin and hair with running water (and soap if available).                                                                                                                 |
|              | Seek medical attention in event of irritation.                                                                                                                                    |
| Inhalation   | If fumes or combustion products are inhaled remove from contaminated area.                                                                                                        |
|              | Lay patient down. Keep warm and rested.                                                                                                                                           |
|              | Prostheses such as false teeth, which may block airway, should be removed, where possible, prior to initiating first aid procedures.                                              |
|              | Apply artificial respiration if not breathing, preferably with a demand valve resuscitator, bag-valve mask device, or pocket                                                      |

|           | <ul> <li>mask as trained. Perform CPR if necessary.</li> <li>Transport to hospital, or doctor.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-----------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Ingestion | <ul> <li>If swallowed do NOT induce vomiting.</li> <li>If vomiting occurs, lean patient forward or place on left side (head-down position, if possible) to maintain open airway and prevent aspiration.</li> <li>Observe the patient carefully.</li> <li>Never give liquid to a person showing signs of being sleepy or with reduced awareness; i.e. becoming unconscious.</li> <li>Give water to rinse out mouth, then provide liquid slowly and as much as casualty can comfortably drink.</li> <li>Seek medical advice.</li> </ul> |

#### Indication of any immediate medical attention and special treatment needed

- Polyethylene glycols are generally poorly absorbed orally and are mostly unchanged by the kidney.
- Dermal absorption can occur across damaged skin (e.g. through burns) leading to increased osmolality, anion gap metabolic acidosis, elevated calcium, low ionised calcium, CNS depression and renal failure.
- Treatment consists of supportive care.

[Ellenhorn and Barceloux: Medical Toxicology]

Propylene glycol is primarily a CNS depressant in large doses and may cause hypoglycaemia, lactic acidosis and seizures.

- The usual measures are supportive care and decontamination (Ipecac/ lavage/ activated charcoal/ cathartics), within 2 hours of exposure should suffice.
- Check the anion gap, arterial pH, renal function and glucose levels.

Ellenhorn and Barceloux: Medical Toxicology

## SECTION 5 FIREFIGHTING MEASURES

#### Extinguishing media

| <ul> <li>Dry chemical powder.</li> <li>BCF (where regulations permit).</li> <li>Carbon dioxide.</li> </ul> |
|------------------------------------------------------------------------------------------------------------|
|------------------------------------------------------------------------------------------------------------|

#### Special hazards arising from the substrate or mixture

| Fire Incompatibility | • Avoid contamination with oxidising agents i.e. nitrates, oxidising acids, chlorine bleaches, pool chlorine etc. as ignition may |
|----------------------|-----------------------------------------------------------------------------------------------------------------------------------|
| Fire incompatibility | result                                                                                                                            |

| Advice for firefighters |                                                                                                                                                                                                                                                                                                                                         |
|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Fire Fighting           | <ul> <li>Alert Fire Brigade and tell them location and nature of hazard.</li> <li>Wear full body protective clothing with breathing apparatus.</li> <li>Prevent, by any means available, spillage from entering drains or water course.</li> <li>Use water delivered as a fine spray to control fire and cool adjacent area.</li> </ul> |
| Fire/Explosion Hazard   | <ul> <li>Combustible.</li> <li>Slight fire hazard when exposed to heat or flame.</li> <li>Heating may cause expansion or decomposition leading to violent rupture of containers.</li> <li>On combustion, may emit toxic fumes of carbon monoxide (CO).</li> </ul>                                                                       |

#### SECTION 6 ACCIDENTAL RELEASE MEASURES

#### Personal precautions, protective equipment and emergency procedures

| Minor Spills | <ul> <li>Remove all ignition sources.</li> <li>Clean up all spills immediately.</li> <li>Avoid breathing vapours and contact with skin and eyes.</li> <li>Control personal contact with the substance, by using protective equipment.</li> </ul> |  |                                                  |       |           |           |             |

## SECTION 7 HANDLING AND STORAGE

## Precautions for safe handling

| Safe handling     | <ul> <li>DO NOT allow clothing wet with material to stay in contact with skin</li> <li>Avoid all personal contact, including inhalation.</li> <li>Wear protective clothing when risk of exposure occurs.</li> <li>Use in a well-ventilated area.</li> <li>Prevent concentration in hollows and sumps.</li> </ul> |
|-------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Other information | <ul> <li>Material is hygroscopic, i.e. absorbs moisture from the air. Keep containers well sealed in storage.</li> <li>Store in original containers.</li> <li>Keep containers securely sealed.</li> </ul>                                                                                                        |

## Conditions for safe storage, including any incompatibilities

| Storage<br>incompatibility | <ul> <li>Glycols and their ethers undergo violent decomposition in contact with 70% perchloric acid. This seems likely to involve formation of the glycol perchlorate esters (after scission of ethers) which are explosive, those of ethylene glycol and 3-chloro-1,2-propanediol being more powerful than glyceryl nitrate, and the former so sensitive that it explodes on addition of water.</li> <li>Alcohols</li> <li>are incompatible with strong acids, acid chlorides, acid anhydrides, oxidising and reducing agents.</li> <li>reacts, possibly violently, with alkaline metals and alkaline earth metals to produce hydrogen</li> <li>react with strong acids, strong caustics, aliphatic amines, isocyanates, acetaldehyde, benzoyl peroxide, chromic acid, chromium oxide, dialkylzincs, dichlorine oxide, ethylene oxide, hypochlorous acid, isopropyl chlorocarbonate, lithium tetrahydroaluminate, nitrogen dioxide, pentafluoroguanidine, phosphorus halides, phosphorus pentasulfide, tangerine oil, triethylaluminium, triisobutylaluminium</li> <li>should not be heated above 49 deg.</li> </ul> |

## MATERIAL DATA

for propylene glycol:

Saturated vapour concentration @ 20 deg C.= 65.8 ppm, 204.6 mg/m3; i.e higher concentrations can only occur as aerosols or at higher temperatures. Odour Threshold: Practically odourless.

A small number of individuals show skin irritation or sensitisation from repeated or prolonged exposure to propylene glycol. A workplace environmental exposure limit (WEEL) has been established by AIHA and is thought to be protective against systemic effects.

#### Exposure controls

| Appropriate<br>engineering controls | Engineering controls are used to remove a hazard or place a barrier between the worker and the hazard. Well-designed<br>engineering controls can be highly effective in protecting workers and will typically be independent of worker interactions to<br>provide this high level of protection.<br>The basic types of engineering controls are:<br>Process controls which involve changing the way a job activity or process is done to reduce the risk.<br>Enclosure and/or isolation of emission source which keeps a selected hazard "physically" away from the worker and<br>ventilation that strategically "adds" and "removes" air in the work environment. |

| Thermal hazards                     | Not Available                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

#### Recommended material(s)

#### GLOVE SELECTION INDEX

Glove selection is based on a modified presentation of the:

"Forsberg Clothing Performance Index".

The effect(s) of the following substance(s) are taken into account in the *computer-generated* selection:

FW-RIC N&A Rice Krispies Type Flavor

| Material   | СРІ |
|------------|-----|
| PE/EVAL/PE | A   |

\* CPI - Chemwatch Performance Index

#### **Respiratory protection**

Type A-P Filter of sufficient capacity. (AS/NZS 1716 & 1715, EN 143:2000 & 149:2001, ANSI Z88 or national equivalent)

Where the concentration of gas/particulates in the breathing zone, approaches or exceeds the "Exposure Standard" (or ES), respiratory protection is required.

Degree of protection varies with both face-piece and Class of filter; the nature of protection varies with Type of filter.

| Required | Half-Face  | Full-Face  | Powered Air |
|----------|------------|------------|-------------|
| Minimum  | Respirator | Respirator | Respirator  |

#### A: Best Selection

B: Satisfactory; may degrade after 4 hours continuous immersion
C: Poor to Dangerous Choice for other than short term immersion
NOTE: As a series of factors will influence the actual performance of the glove, a final selection must be based on detailed observation. \* Where the glove is to be used on a short term, casual or infrequent basis, factors such as "feel" or convenience (e.g. disposability), may dictate a choice of gloves which might otherwise be unsuitable following long-term or frequent use. A qualified practitioner should be consulted.

| <b>Protection Factor</b> |          |                       |                            |

| Possibility of<br>hazardous reactions  | See section 7                                                                                                                                                    |
| Conditions to avoid                    | See section 7                                                                                                                                                    |
| Incompatible materials                 | See section 7                                                                                                                                                    |
| Hazardous<br>decomposition<br>products | See section 5                                                                                                                                                    |

#### SECTION 11 TOXICOLOGICAL INFORMATION

## Information on toxicological effects

| formation on toxico                     | iogical ellects                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                                                            |                                                                                                                 |
|-----------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------|
| Inhaled                                 | The material is not thought to produce respiratory irritation (as classified by EC Directives using animal models).<br>Nevertheless inhalation of vapours, fumes or aerosols, especially for prolonged periods, may produce respiratory discomfort<br>and occasionally, distress.<br>Inhalation of vapours may cause drowsiness and dizziness. This may be accompanied by narcosis, reduced alertness, loss<br>of reflexes, lack of coordination and vertigo.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                            |                                                                                                                 |
| Ingestion                               | Accidental ingestion of the material may be damaging to the health of the individual.<br>Ingestion of propylene glycol produced reversible central nervous system depression in humans following ingestion of 60 ml.<br>Symptoms included increased heart-rate (tachycardia), excessive sweating (diaphoresis) and grand mal seizures in a 15<br>month child who ingested large doses (7.5 ml/day for 8 days) as an ingredient of vitamin preparation.<br>Excessive repeated ingestions may cause hypoglycaemia (low levels of glucose in the blood stream) among susceptible<br>individuals; this may result in muscular weakness, incoordination and mental confusion.                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                            |                                                                                                                 |
| Skin Contact                            | <ul> <li>Skin contact is not thought to have harmful health effects (as classified under EC Directives); the material may still produce health damage following entry through wounds, lesions or abrasions.</li> <li>The material may produce moderate skin irritation; limited evidence or practical experience suggests, that the material either: <ul> <li>produces moderate inflammation of the skin in a substantial number of individuals following direct contact and/or</li> <li>produces significant, but moderate, inflammation when applied to the healthy intact skin of animals (for up to four hours), such inflammation being present twenty-four hours or more after the end of the exposure period.</li> </ul> </li> <li>Skin irritation may also be present after prolonged or repeated exposure; this may result in a form of contact dermatitis (nonallergic). The dermatitis is often characterised by skin redness (erythema) and swelling (oedema) which may progress to blistering (vesiculation), scaling and thickening of the epidermis.</li> </ul> |                                                                                            |                                                                                                                 |
| Eye                                     | Limited evidence exists, or practical experience suggests, that the material may cause eye irritation in a substantial number<br>of individuals and/or is expected to produce significant ocular lesions which are present twenty-four hours or more after<br>instillation into the eye(s) of experimental animals. Repeated or prolonged eye contact may cause inflammation<br>characterised by temporary redness (similar to windburn) of the conjunctiva (conjunctivitis); temporary impairment of vision<br>and/or other transient eye damage/ulceration may occur.<br>Irritation of the eyes may produce a heavy secretion of tears (lachrymation).                                                                                                                                                                                                                                                                                                                                                                                                                       |                                                                                            |                                                                                                                 |
| Chronic                                 | Limited evidence suggests that repeated or long-term occupational exposure may produce cumulative health effects involving organs or biochemical systems.<br>There exists limited evidence that shows that skin contact with the material is capable either of inducing a sensitisation reaction in a significant number of individuals, and/or of producing positive response in experimental animals.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |                                                                                            |                                                                                                                 |

## **CMR STATUS**

Not Applicable

#### **SECTION 12 ECOLOGICAL INFORMATION**

#### Toxicity

#### NOT AVAILABLE

| Ingredient       | Endpoint      | Test Duration | Effect        | Value         | Species       | BCF           |
|------------------|---------------|---------------|---------------|---------------|---------------|---------------|
| propylene glycol | Not Available |
| vanillin         | Not Available |

Propylene glycol is known to exert high levels of biochemical oxygen demand (BOD) during degradation in surface waters. This process can adversely affect aquatic life by consuming oxygen needed by aquatic organisms for survival. Large quantities of dissolved oxygen (DO) in the water column are consumed when microbial populations decompose propylene glycol.

Sufficient dissolved oxygen levels in surface waters are critical for the survival of fish, macro-invertebrates, and other aquatic organisms.

## Persistence and degradability

| Ingredient       | Persistence: Water/Soil | Persistence: Air |
|------------------|-------------------------|------------------|
| propylene glycol | LOW                     | LOW              |
| vanillin         | LOW                     | LOW              |

#### **Bioaccumulative potential**

| Ingredient       | Bioaccumulation     |
|------------------|---------------------|
| propylene glycol | LOW (BCF = 1)       |
| vanillin         | LOW (LogKOW = 1.21) |

## Mobility in soil

| Ingredient       | Mobility          |
|------------------|-------------------|
| propylene glycol | HIGH (KOC = 1)    |
| vanillin         | LOW (KOC = 38.45) |

#### SECTION 13 DISPOSAL CONSIDERATIONS

#### Waste treatment methods

Product / Packaging disposal Legislation addressing waste disposal requirements may differ by country, state and/ or territory. Each user must refer to laws operating in their area. In some areas, certain wastes must be tracked. A Hierarchy of Controls seems to be common - the user should investigate:

use.

| USA - TSCA                       | Y                                                                                                                                                                                     |
| Legend:                          | Y = All ingredients are on the inventory N = Not determined or one or more ingredients are not on the inventory and are not exempt from listing(see specific ingredients in brackets) |

## **SECTION 16 OTHER INFORMATION**

#### Other information

Classification of the preparation and its individual components has drawn on official and authoritative sources as well as independent review by the Chemwatch Classification committee using available literature references.

A list of reference resources used to assist the committee may be found at:

## www.chemwatch.net

The (M)SDS is a Hazard Communication tool and should be used to assist in the Risk Assessment. Many factors determine whether the reported Hazards are Risks in the workplace or other settings. Risks may be determined by reference to Exposures Scenarios. Scale of use, frequency of use and current or available engineering controls must be considered.
